What is Claimed is:

- Continuous process for making water-reactive pouches containing a product, comprising the steps of:
 - a) continuously feeding a first water-soluble film onto a horizontal portion of an continuously and rotatably moving endless surface, which comprises a plurality of moulds, or onto a non-horizontal portion thereof and continuously moving the film to said horizontal portion;
 - b) forming from the film on the horizontal portion of the continuously moving surface, and in the moulds on the surface, a continuously moving, horizontally positioned web of open pouches;
 - c) filling the continuously moving, horizontally positioned web of open pouches with a product, to obtain a horizontally positioned web of open, filled pouches;
 - d) preferably continuously, closing the web of open pouches, to obtain closed pouches, preferably by feeding a closing material onto the horizontally positioned web of open, filed pouches, to obtain closed pouches; and
 - e) optionally sealing the closed pouches.
- 2. Continuous process for making pouches, containing a fabric or surface cleaning product and/ or fabric or surface care product, preferably water-permeable pouches, the process comprising the steps of:
 - a) continuously feeding a first water-soluble film onto a horizontal portion of a continuously and rotatably moving endless surface, which comprises a plurality of moulds, or onto a non-horizontal portion thereof and continuously moving the film to said horizontal portion;
 - b) forming from the film on the horizontal portion of the continuously moving surface, and in the moulds on the surface, a continuously moving, horizontally positioned web of open pouches;
 - c) filling the continuously moving, horizontally positioned web of open pouches with a product, to obtain a horizontally positioned web of open, filled pouches;
 - d) preferably continuously, closing the web of open pouches, to obtain closed pouches, preferably by feeding a closing material onto the horizontally positioned web of open, filed pouches, to obtain closed pouches; and
 - e) optionally sealing the closed pouches.

- 3. Continuous process as in claim 1 whereby step d) and preferably also step e) is done in a continuous manner, while the web of pouches is in horizontal position and continuously moving, preferably whereby in step d) and optionally in step e) the wed of pouches is present on said horizontal portion of the endless surface.
- 4. Continuous process according to claim 1 whereby step a), b), c), d) and preferably e) are done on said horizontal portion of the endless surface, which moves with a constant speed.
- 5. Continuous process according to claim 1 whereby the surface is part of a rotating platen conveyer belt.
- 6. Continuous process according to claim 1 whereby the film is drawn into the moulds by application on the film and/or moulds of vacuum, heat or a solvent, or combination thereof, preferably at least by application of vacuum on the moulds.
- 7. Continuous process according to claim 1 whereby the film is held in position on the surface by application of vacuum through holes present along the edges of the surface and/ or present along the edges of the moulds of the surface.
- 8. Continuous process according to claim 1 whereby the filling of the open pouches with product is done by a moving filling station which is returnable and which is variable in speed.
- 9. Continuous process according to claim 1 whereby, prior to filling, a second surface with openings, which each have a surface area equaling the surface area of an open pouch, is placed above the continuously moving web of open pouches and is moved continuously in the direction of the web of pouches and with the speed of the web of open pouches, such that each opening remains positioned above one open pouch during the filling step and that the space between at least part of the moulds is covered by said surface, preferably said second surface being an endless, rotatably moving belt.
- 10. Continuous process according to claim 1 whereby the closing step is done with a second

CM2500MC

film, preferably water-soluble, or a second web of closed, filled pouches, preferably water-reactive pouches.

11. Continuous process according to claim 1 whereby the product is a solid or liquid fabric cleaning or surface cleaning product and/ or fabric or surface care product, preferably a laundry detergent or dish washing detergent.
